

# Loss of information at deeper divergences

David Penny  
Phylomania  
Nov 2013

The mathematicos caused the problem!!!  
Now they should solve it!

Okay, maybe we could help them,  
Here are some ideas

Need relative – not absolute - information

# the comfort zone

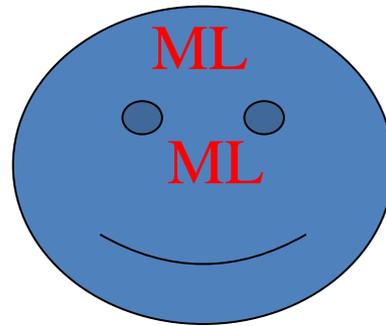

ML Int

ML Rel

ML<sub>av</sub>

ML<sub>an</sub> MP

ML<sub>ep</sub> MP

classic phylogeny

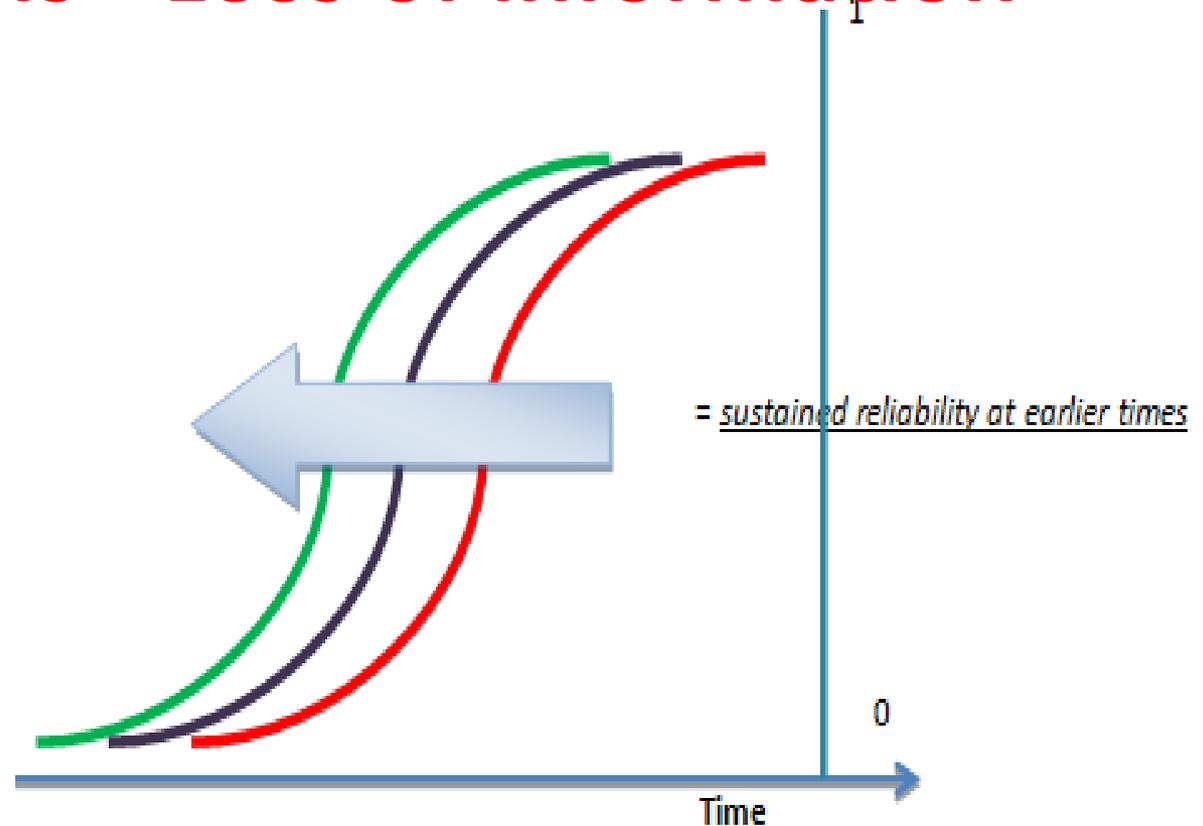

deep

# Markov models - Loss of information

Probability of Correct Result

1

can we go  
further back  
in time?

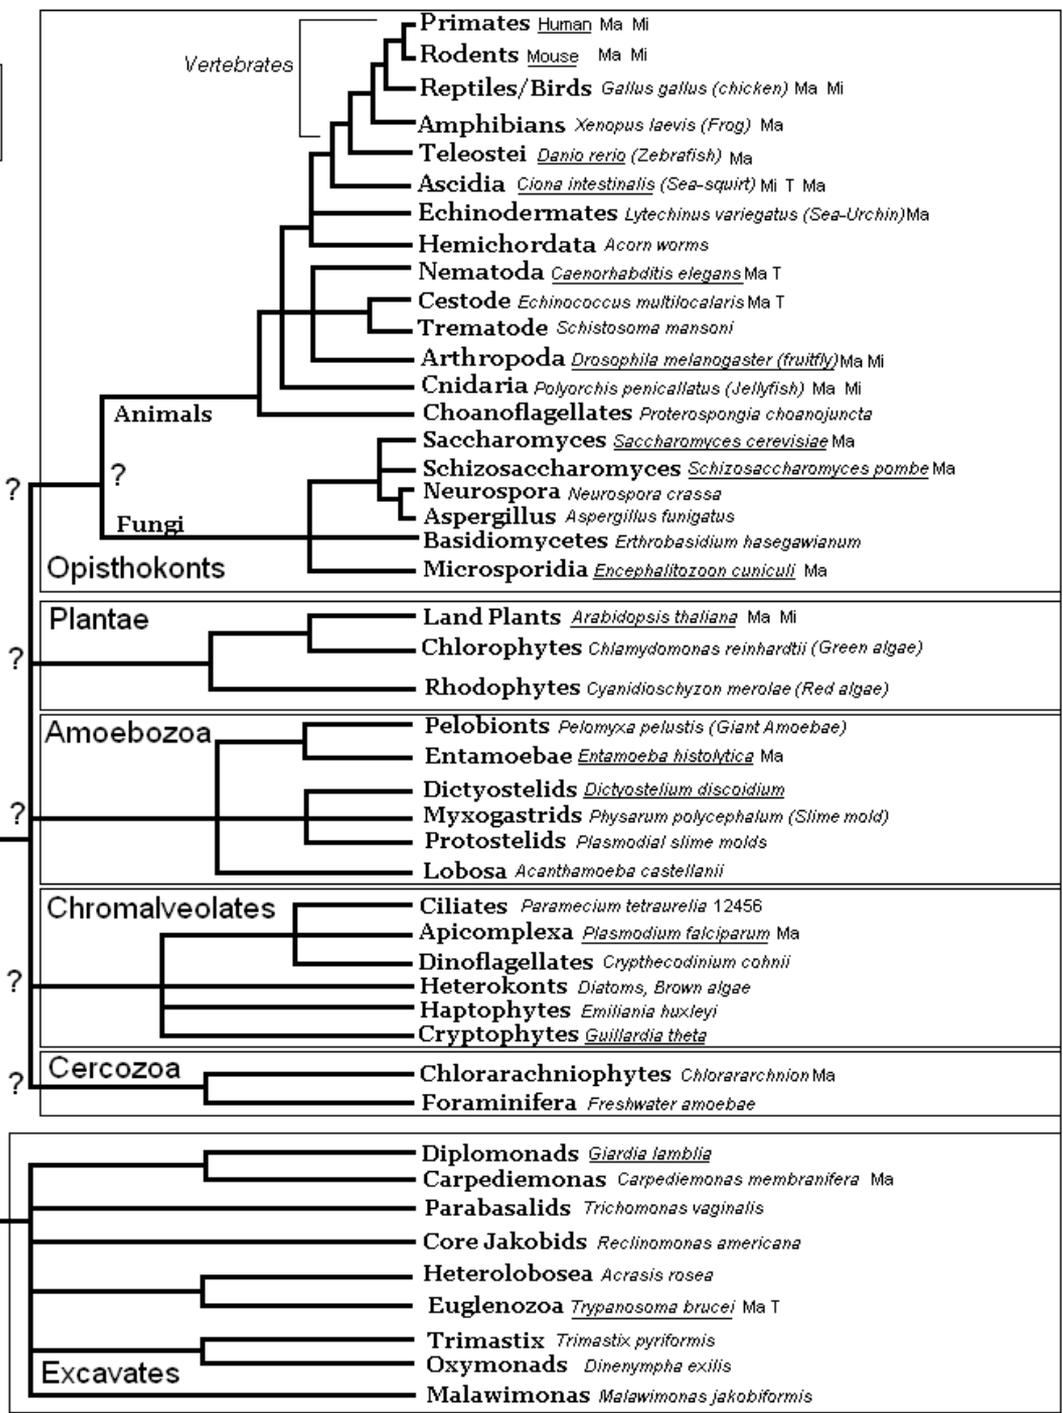

Key

-  = standard
-  = 3D modelling
-  = PFAM modelling

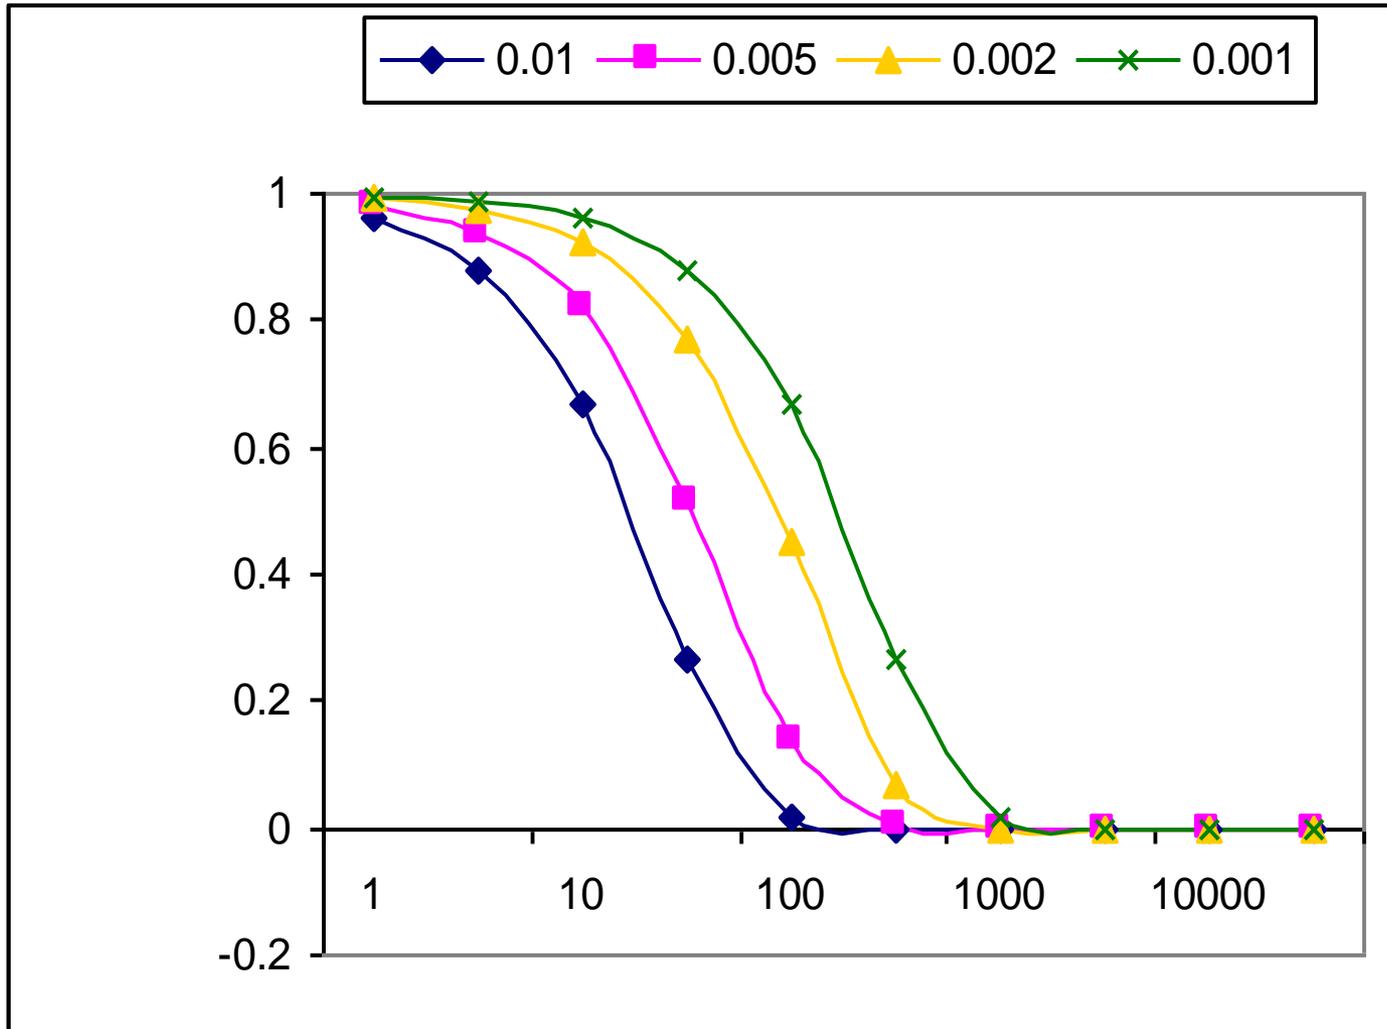

damned  
eukaryotes!

Key:  
Ma Major-splicing  
Mi Minor-splicing  
T Trans-splicing

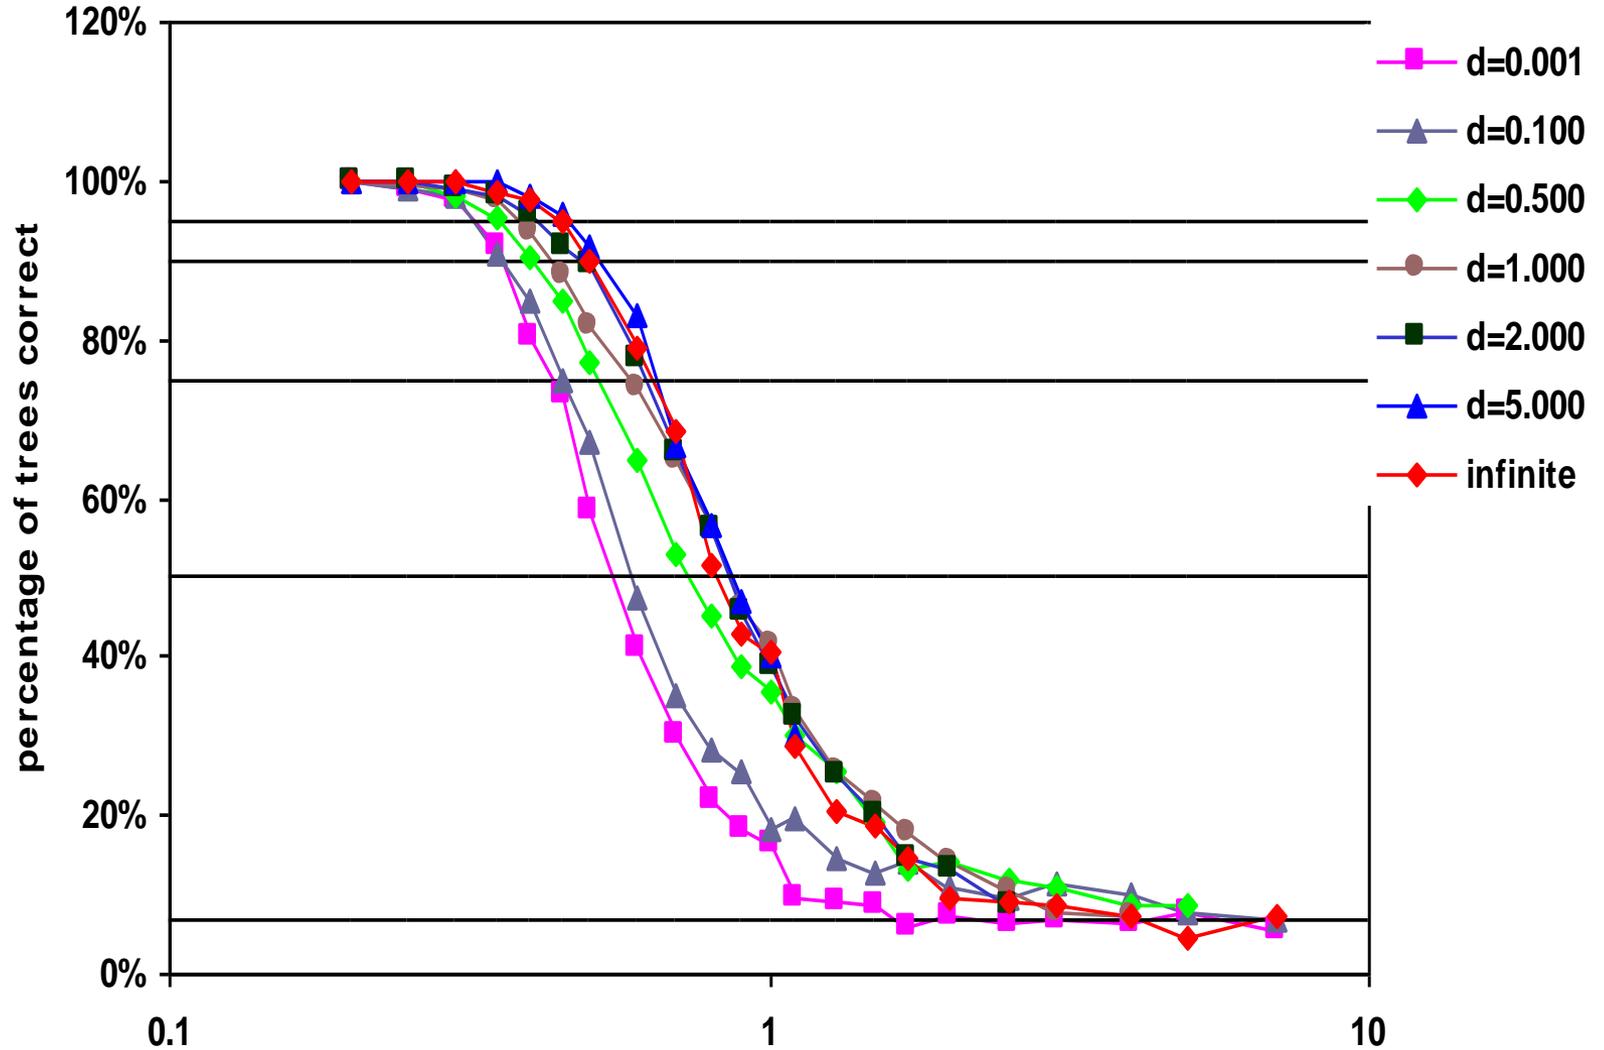

Eukaryotic  
Ancestor  
Ma,T?

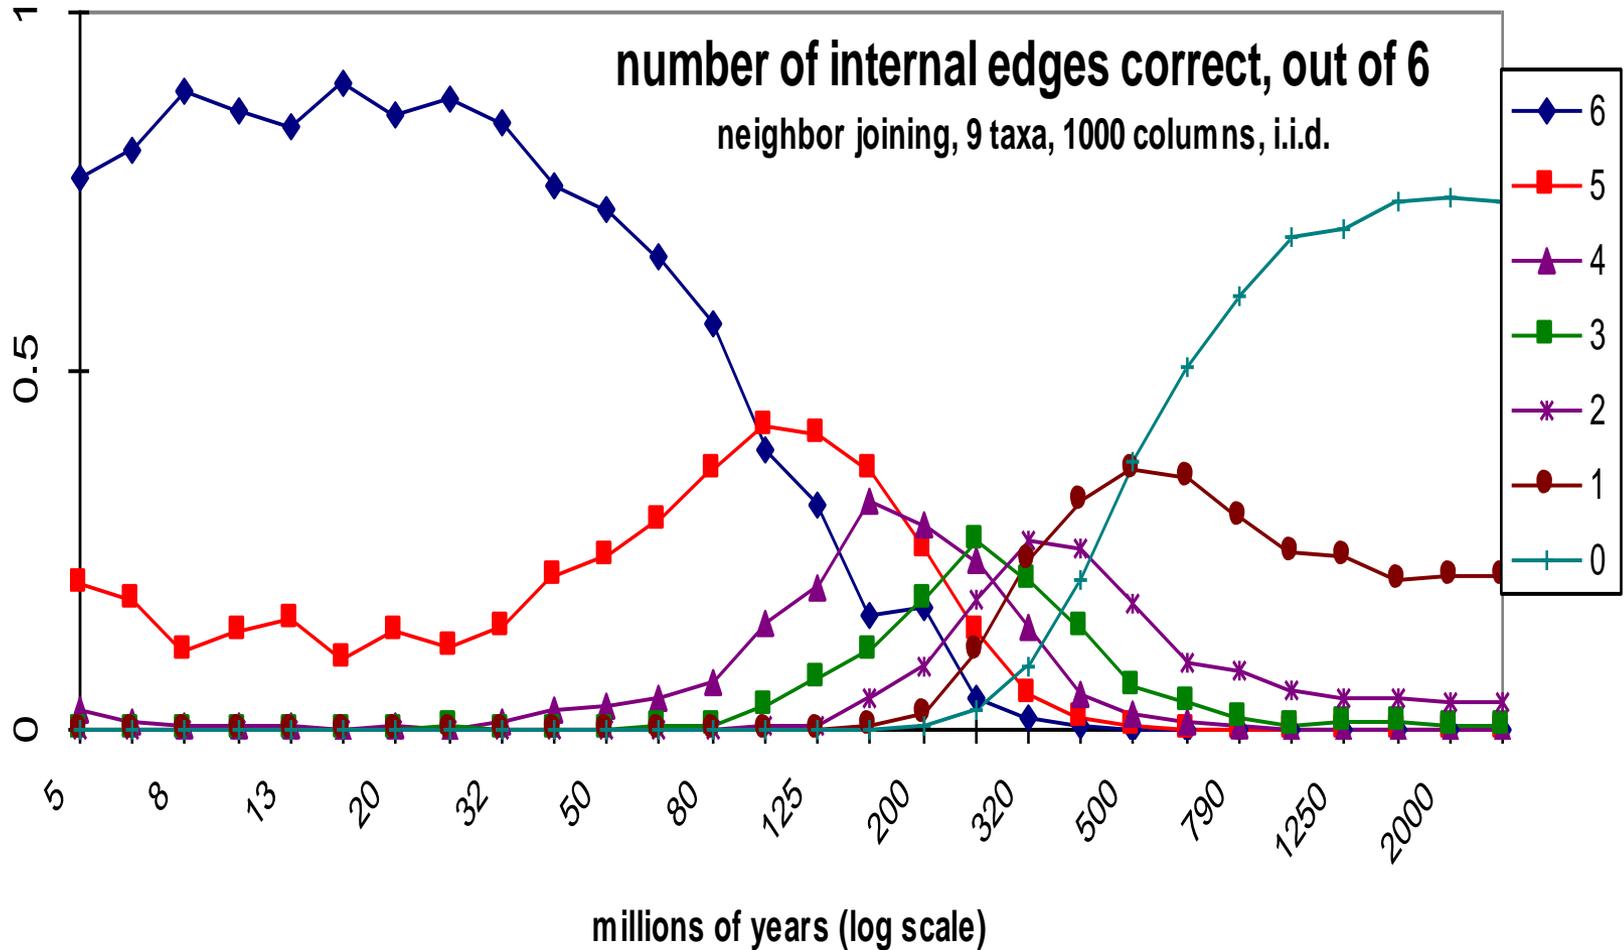

Calculated results,  $\Delta \leq \frac{1}{4} + ne^{-qt}$

# 1. simulation results with covarion model

# simulation results with standard model

# 1 idea, delete fast sites

If there were a mixture of

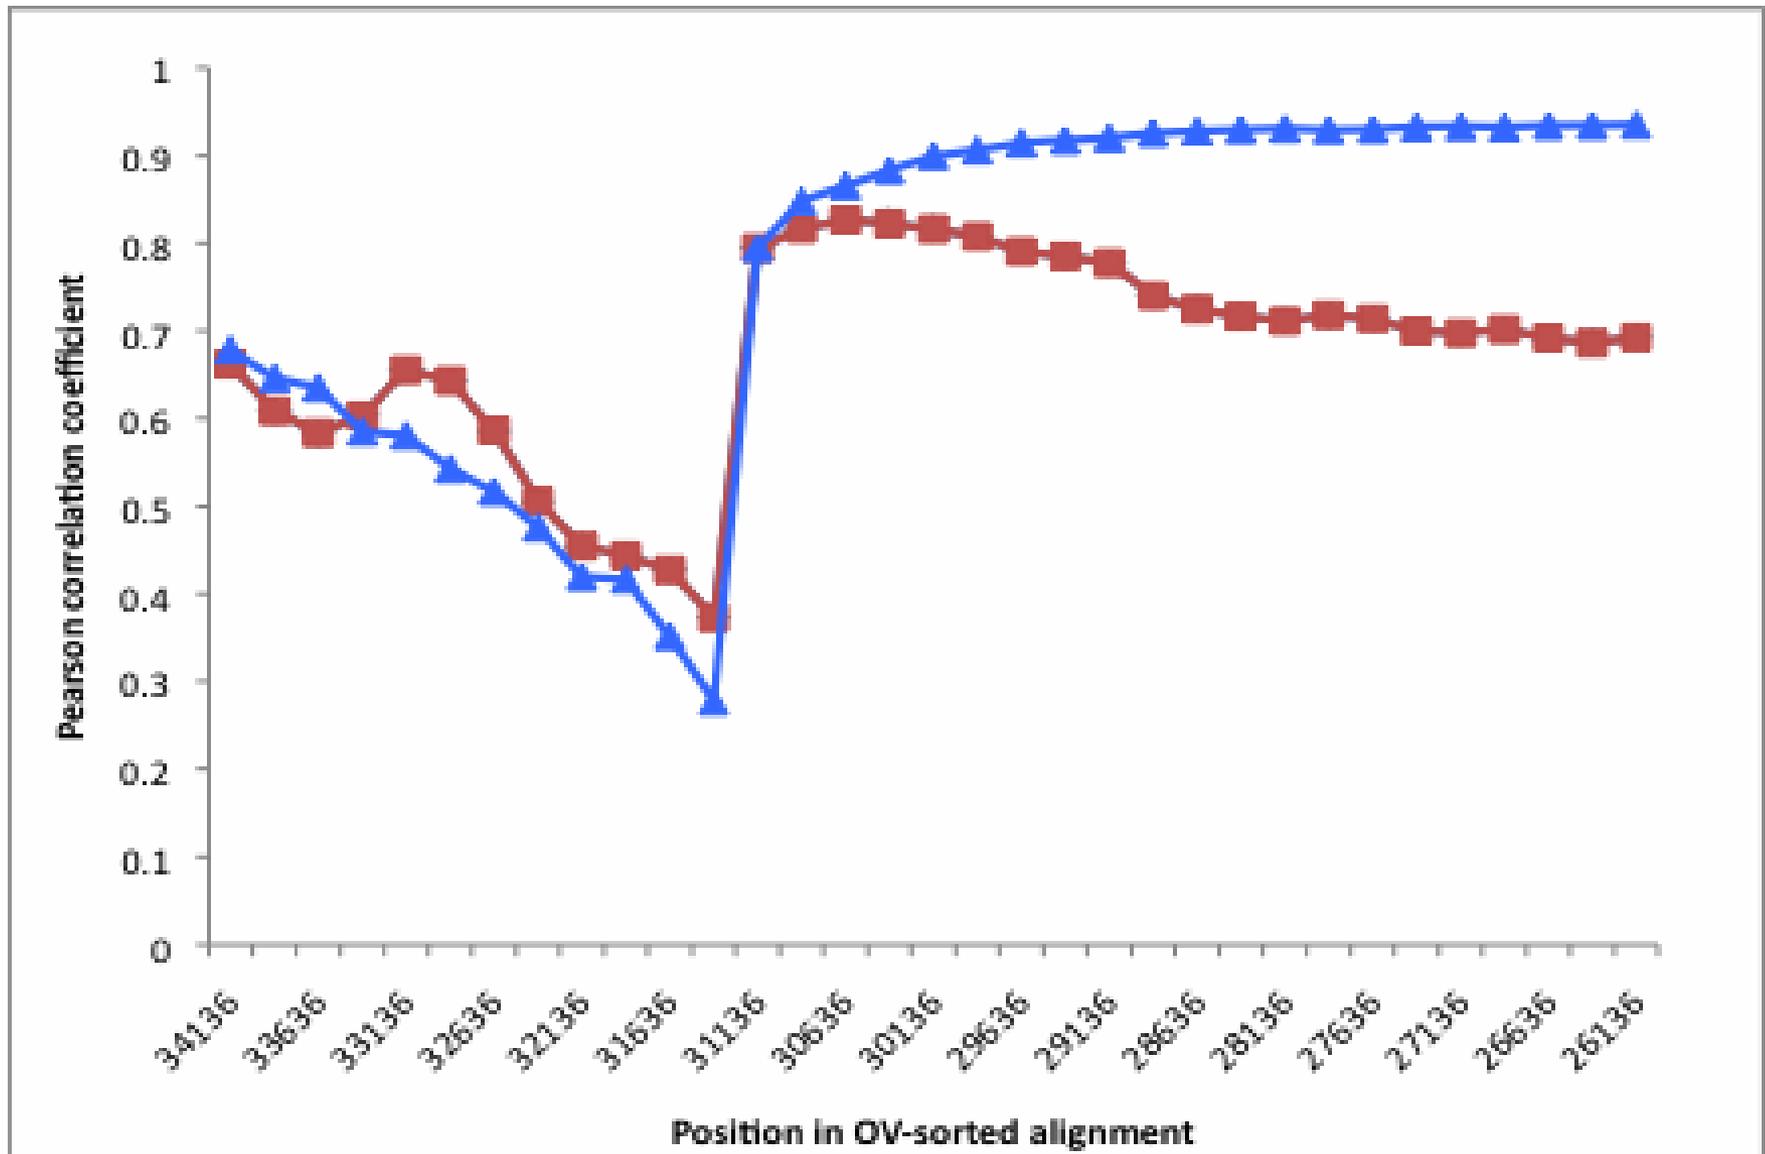

a) faster evolving sites, and

b) and we could identify them

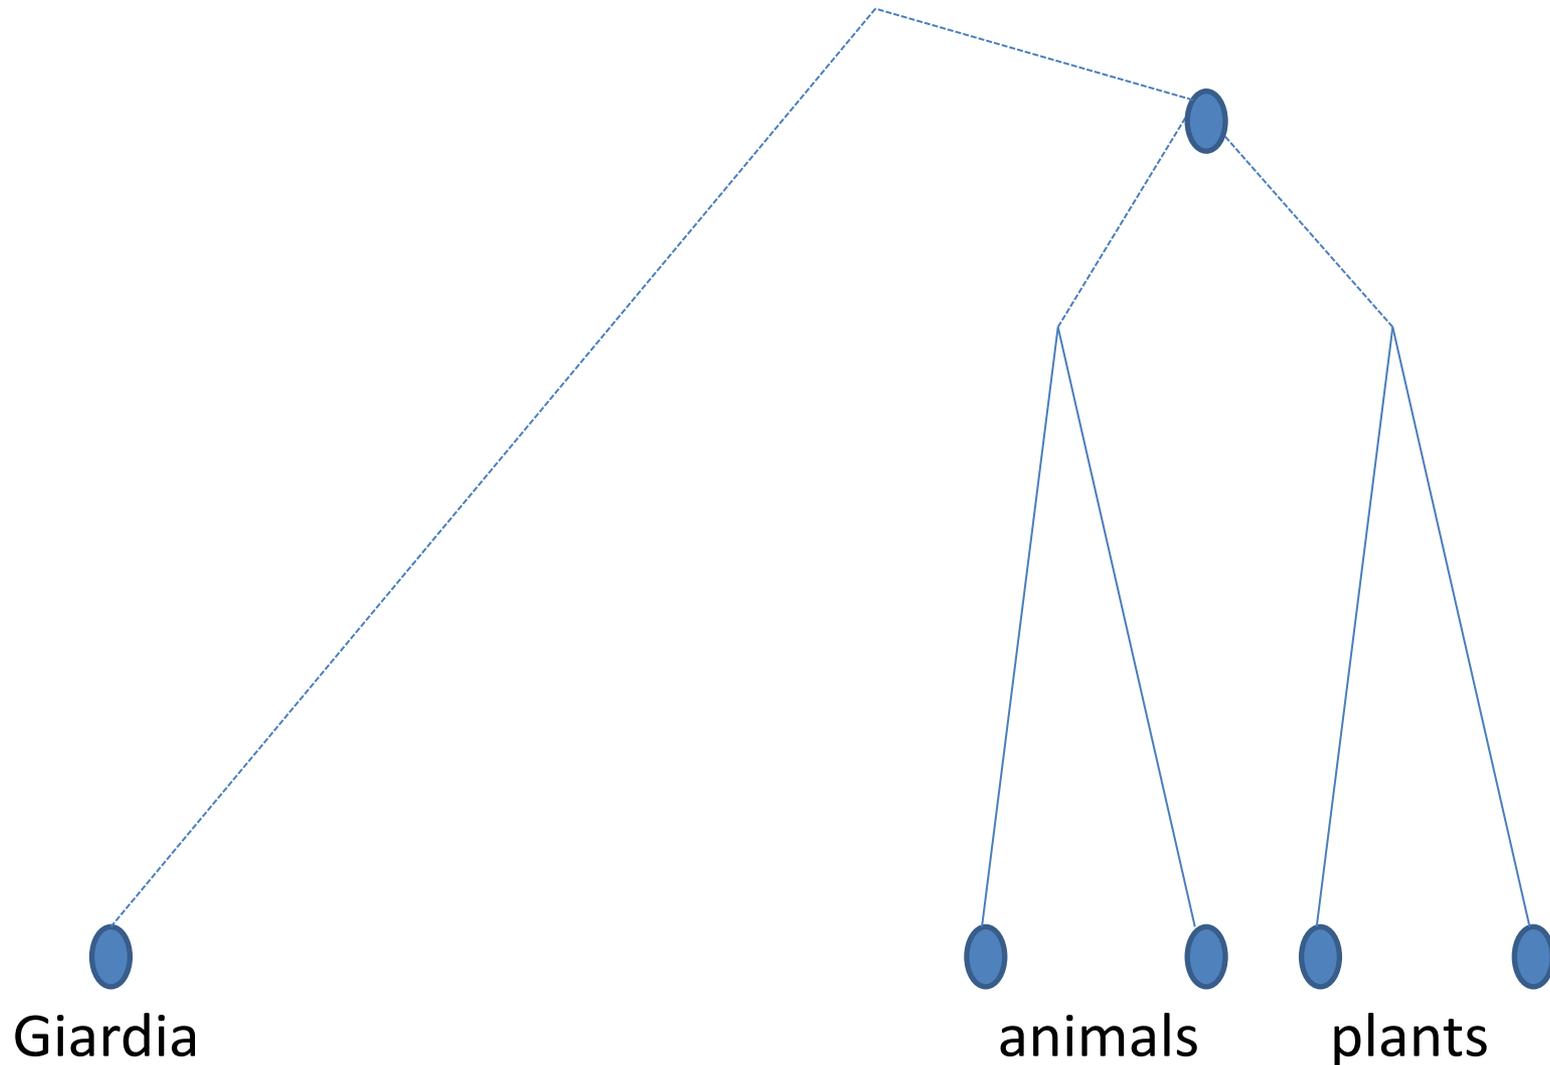

c) and remove them

would that help go further back in time?

# deleting faster sites

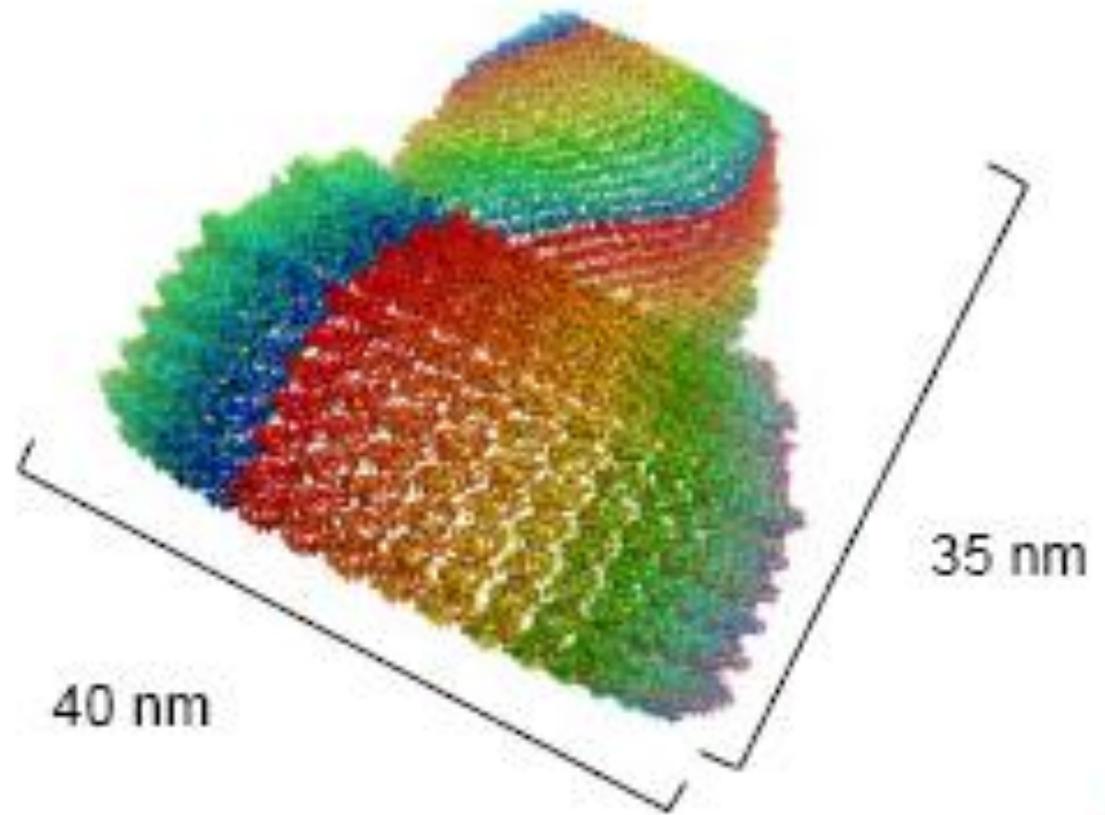

# Ancestral Sequence Reconstruction

testing  
Ancestral  
Sequence  
Reconstr-  
uction

A

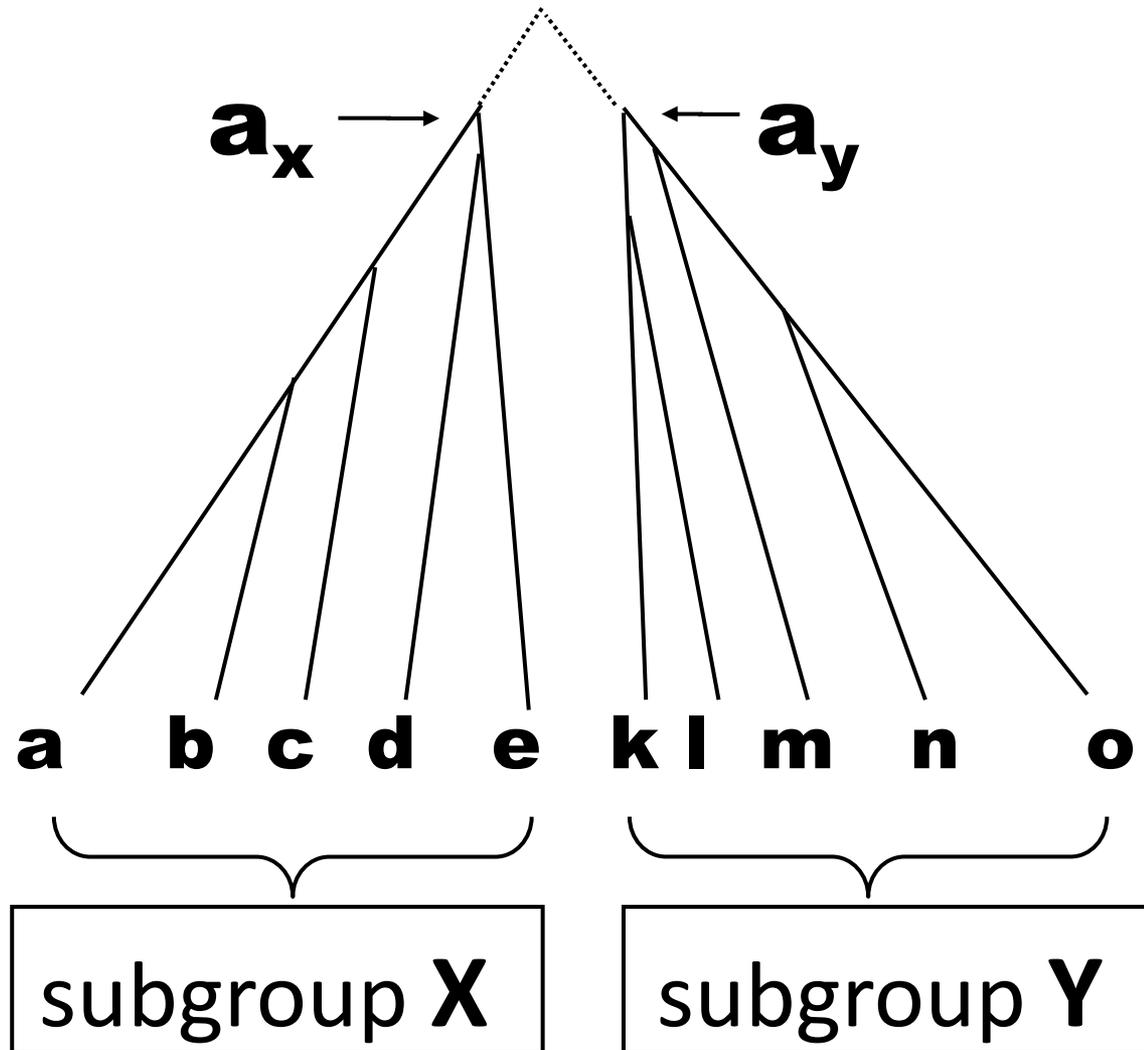

B

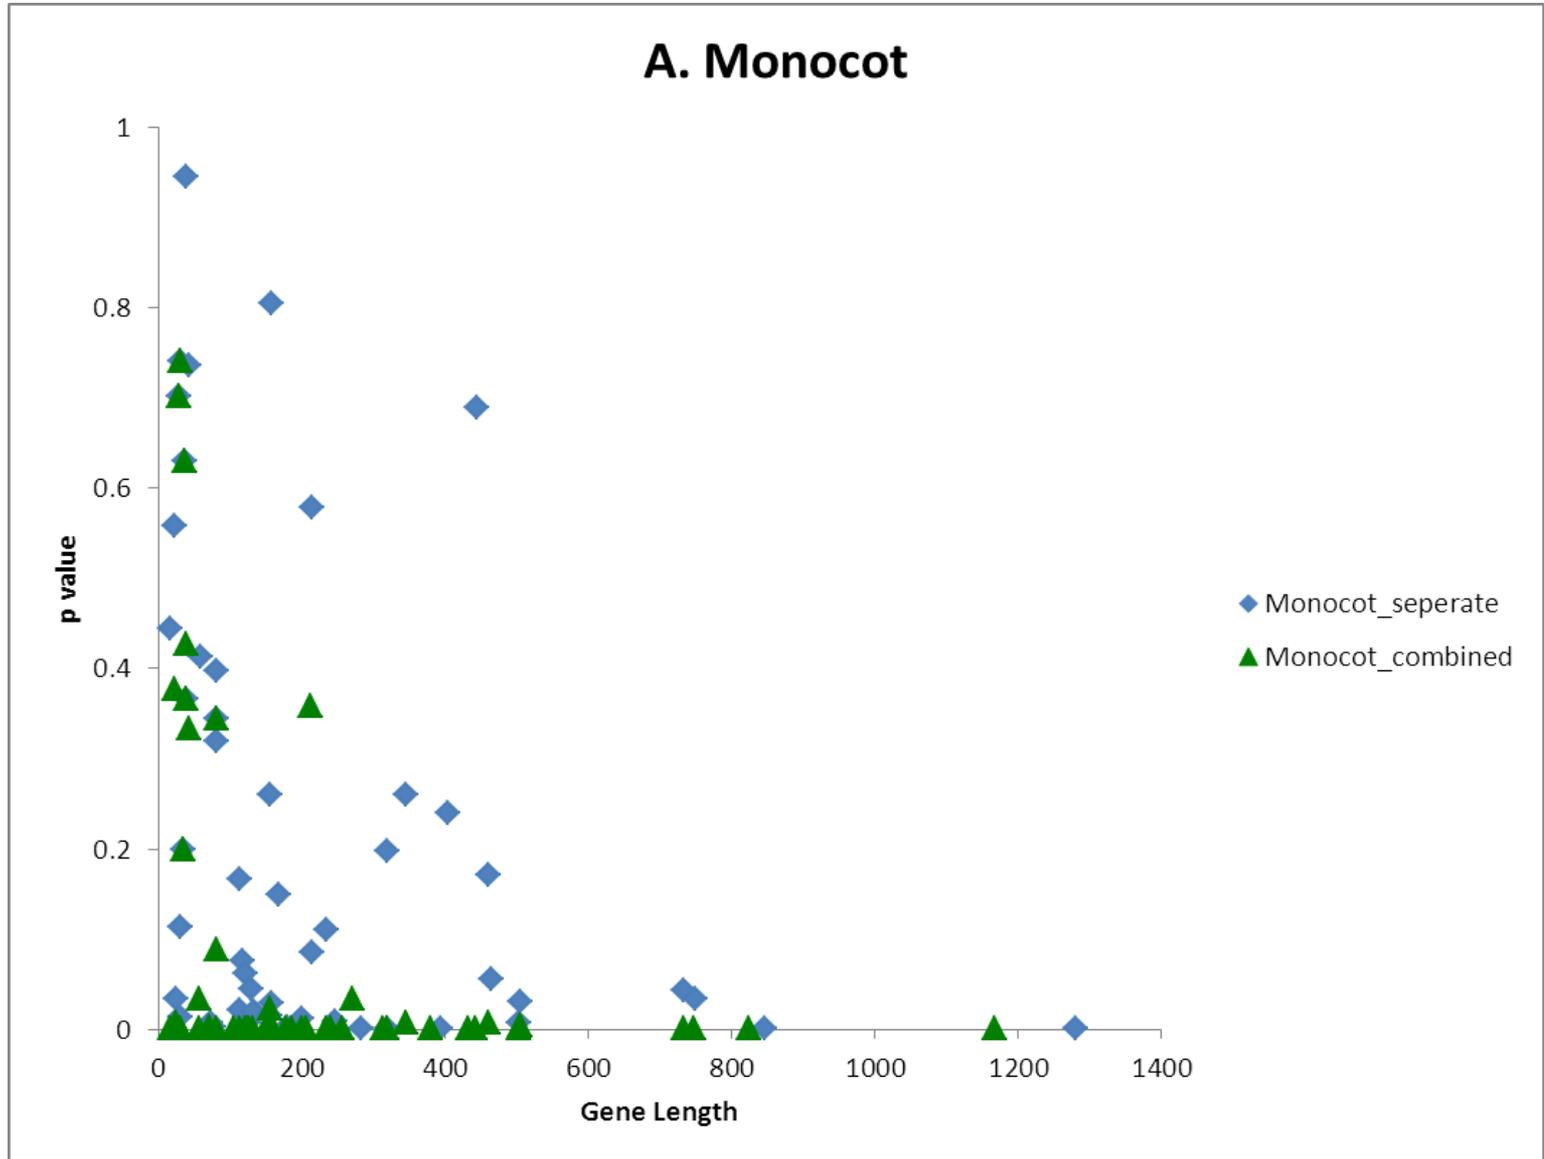

vaults  
3-D info

# subgroups X and Y

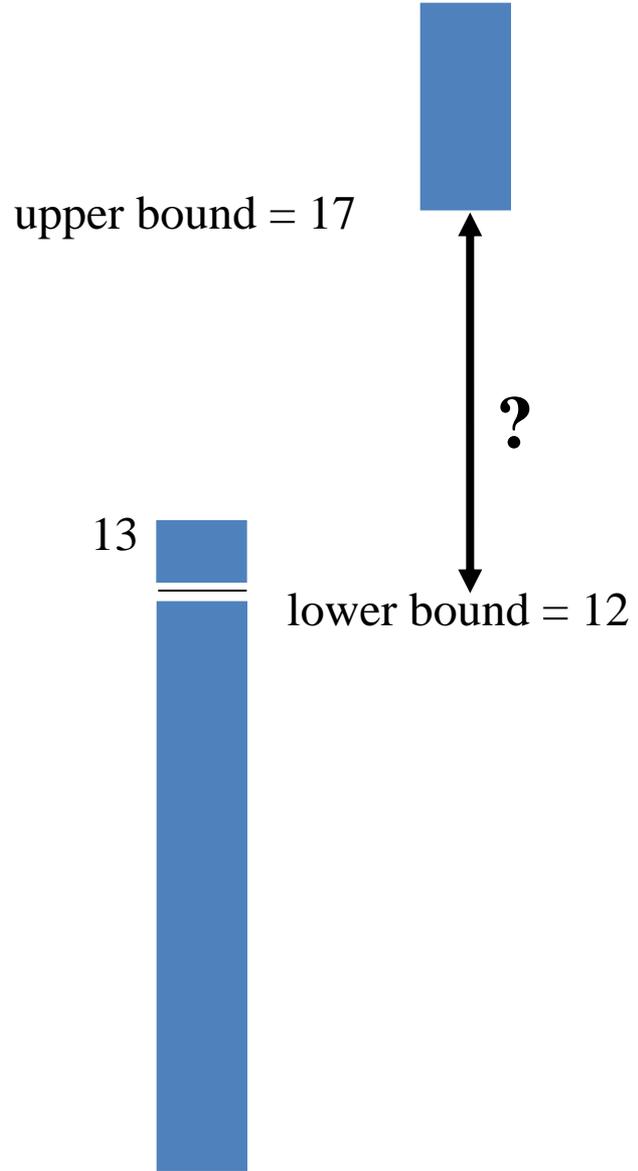

# 4. gene length vs similarity

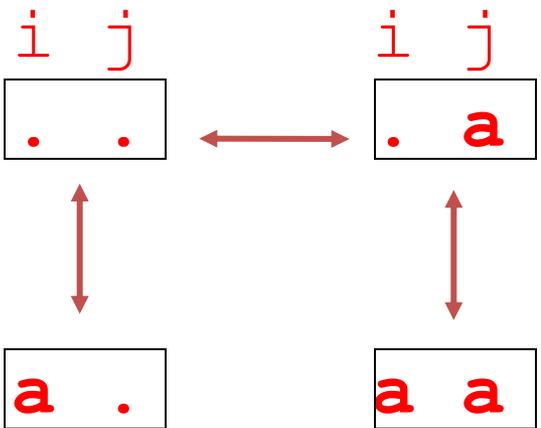

# 5, Weighting

	<i>i</i>	<i>j</i>	3	4	5	6	7	8	9	0	1	2
$f_1$	a	.	.	.	.	a	.	.	.	.	.	.
$f_2$	.	.	.	.	.	a	.	.	.	.	a	.
$f_3$	.	.	.	.	.	a	.	.	.	.	.	a
$f_4$	.	.	.	.	.	a	.	.	.	.	.	.
$g_1$	.	a	a	a	a	.	a	a	.	.	.	.
$g_2$	a	a	a	a	a	.	.	a	.	.	a	.
$h_1$	.	.	a	a	a	.	.	.	a	a	.	.
$h_2$	.	.	a	.	a	.	.	.	a	a	.	.
$h_3$	a	.	.	a	a	.	.	.	a	a	.	.

Would weighting by incompatibilities help?

# information from sequence order not used
